

Minimum Liquid Discharge (MLD)

Description:

Minimum Liquid Discharge (MLD) offers a highly effective and increasingly adopted strategy that balances stringent environmental goals with practical operational and economic considerations. MLD is about significantly reducing, rather than entirely eliminating, the volume of wastewater discharged.

At Water Technology BD Ltd, we specialize in designing and implementing tailored MLD solutions that help industries achieve a harmonious balance between robust environmental performance and sustainable economic operations. By leveraging advanced membrane technologies and intelligent process design, we enable our clients to drastically reduce their liquid discharge, conserve valuable water resources, and secure long-term environmental compliance.
